

# Requirements Traceability — NHS ERIC 2024/25

## Traceability chain

Finding → business need → requirement → solution capability → test/UAT evidence.

### F01 / F04

Unique site records and substantial variation support FR-01, FR-02 and FR-03 → record identification, calculation and exception screening.

### F02

Contextual missingness supports FR-05 → conditional/context-aware validation.

### F03

Validation findings support FR-04 → explicit business-rule validation.

### F05

Exceptions require contextual interpretation → FR-06 and FR-07 → context and explainable flagging.

## Source integrity

FR-08 and NFR-03 → preserve source values and separate analytical treatment.

## Testing linkage

TC-01 to TC-10 validate the underlying analytical logic; UAT-01 to UAT-08 define intended Power BI user acceptance checks.
